ABSTRACT

An “opulent cart digital mart” website is online shopping website in which vendors, businesses/distributors/marketers can sell products/services and the customer can purchase from that website and shows AI based recommendation to the users

Admin Handles site and its content, admin can enlarge scope of website, Add new Project, User and assign Project etc., As well as admin can maintain all above things by Deleting, Editing, Restoring these Things also handle to approve the new store registration , product registration .

Clients can login and register to the system. Clients can review the product. They can also select a particular product. They can also get suggestions based on the ai recommendation and also review the payment page.

And at the end we would like to conclude that the digital mart website is built with the aim to give customers trust to buy online without hesitation of how it will look on them. also enhance the large market for the small business starter.

OVERVIEW OF THE COMPANY

History

Different Products

=====

OVERVIEW OF THE COMPANY

Wappnet System Pvt Ltd.

Wappnet Systems was founded with the goal of creating customised, innovative software solutions that may meet the needs of clients in a cost-effective manner. The firm was founded by three passionate engineers who wanted to make a difference by demonstrating real-world solutions to set themselves apart from the competition. We set out with the aim of reaching beyond the skies and great dreams swirling in our heads, and we came up with several successful business softwares. Our superior industry-based strategy aids in the delivery of ground-breaking mobile apps that assist the customer in establishing a successful business.

The company provides tailored services depending on the client's needs, and the products are provided in excellent quality at reasonable prices and on time. As a result of our devotion, competitiveness, and significant growth, we are able to deliver a wide range of enhancements in our services . A company run by professional people and a capable leader has the potential to achieve greater heights.

Technical Specifications in department

Sequence of operators

Product stages

=====

OVERVIEW OF THE COMPANY DEPARTMENT

All departments

- HR Department
- Sales Marketing Department
- Development Department
- Testing Department

Technical Specifications in department

- **HR Department**

A HR department is tasked with maximizing employee productivity and protecting the company from any issues that may arise within the workforce. HR responsibilities include compensation and benefits, recruitment, firing, and keeping up to date with any laws that may affect the company and its employees.

- **Sales Marketing Department**

A sales and marketing department has the responsibility for deciding where the company should sell and what its prices should be. it's designed to make the life of you and your field sales team easier while increasing productivity and performance.

- **Development Department**

A Development department in different department like Web Development , Android Development , iOS Development etc. Web development services help create all types of web-based software and ensure great experience for web users.

Android app development services comprise design, development, and enhancement of mobile software that runs on all supported Android OS versions. And an iOS developer is responsible for developing applications for mobile devices powered by Apple's iOS operating system

- **Testing Department**

Testing is the process of evaluating a system or its component(s) with the intent to find whether it satisfies the specified requirements or not. In simple words, testing is executing a system in order to identify any gaps, errors, or missing requirements in contrary to the actual requirements.

Sequence of operators

First of all, research teams acquire all the requirements from customers then analyze it and derive features to be developed for product. Research team also estimates cost and time to complete the project.

Then work is divided as per respective team and work is given to them to complete in specific time duration. Like, Laravel team is assigned with all the back-end work, React JS team is assigned all front-end related work.

After completion of development testing team is responsible for testing of the project to maintain quality of the project developed.

INTRODUCTION TO INTERNSHIP

Project Summary

Table 3.1: Project Summary

Project Title	Digital Mart	
Aim	Our main Aim is to remove the barrier that is generated due to lack of consumer trust as they are not physically touching or can watch the product but by showing it on avatar they can at least look and decide that how it will suit on them as per body measurement. When you understand who your ideal customer is, what they look like, their habits, interests, challenges, aspirations, in fact everything about them, you'll be much more effective in marketing to them.	
Developed At	Wappnet System Pvt. Ltd.	
Project Category	Web site	
Tools	IDE	Visual Studio Code
	Languages/Frameworks	React.js, node.js, Express.js, python Django
	Database	Postgres
Duration	3 Months (January 2022 to April 2022)	

Purpose

Our main purpose is to remove the barrier that is generated due to lack of consumer trust as they are not physically touching or can watch the product but by showing it on avatar they can at least look and decide that how it will suit on them as per body measurement. When you understand who your ideal customer is, what they look like, their habits, interests, challenges, aspirations, in fact everything about them, you'll be much more effective in marketing to them.

Objective

The main objective of our project is to enhance the large market for the small business and Ai generated recommendation of the product and communicate using real time chat.

Scope

- E-commerce has bloomed over the years and is one of the fastest-growing domains in the online world.
- In India, people prefer shopping online these days rather than having to visit the physical store. And in that if avatar is provided to customer than the use of online shopping site will be much larger because due to avatar customer can easily get to know about how the product will look on them by simply entering body measurement data

Technology and Literature Review

Table 3.2 Technologies Used to Develop Project

Front End	React.js, javascript , tailwindCSS
Back End	node.js , Express.js , python Django
Database	Postgres

Planning

Project / Internship Development Approach and Justification

The software development models are the various processes or methodologies that are being selected for the development of the project depending on the project's aims and goals. There are many development life cycle models that have been developed in order to achieve different required objectives. The models specify the various stages of the process and the order in which they are carried out.

The selection of model has very high impact on the testing that is carried out. It will define the what, where and when of our planned testing, influence regression testing and largely determines which test techniques to use.

According to our project requirements we chose scrum methodology to accomplish project in effective and timely manner.

Scrum Methodology

Scrum is an agile development methodology used in the development of Software based on an iterative and incremental processes. Scrum is adaptable, fast, flexible and effective agile framework that is designed to deliver value to the customer throughout the development of the project. The primary objective of Scrum is to satisfy the customer's need through an environment of transparency in communication, collective responsibility and continuous progress. The development starts from a general idea of what needs to be built, elaborating a list of characteristics ordered by priority (product backlog) that the owner of the product wants to obtain.

Scrum Methodology & Process

Scrum is precisely an evolution of Agile Management. Scrum methodology is based on a set of very defined practices and roles that must be involved during the software development process. It is a flexible

methodology that rewards the application of the 12 agile principles in a context agreed by all the team members of the product.

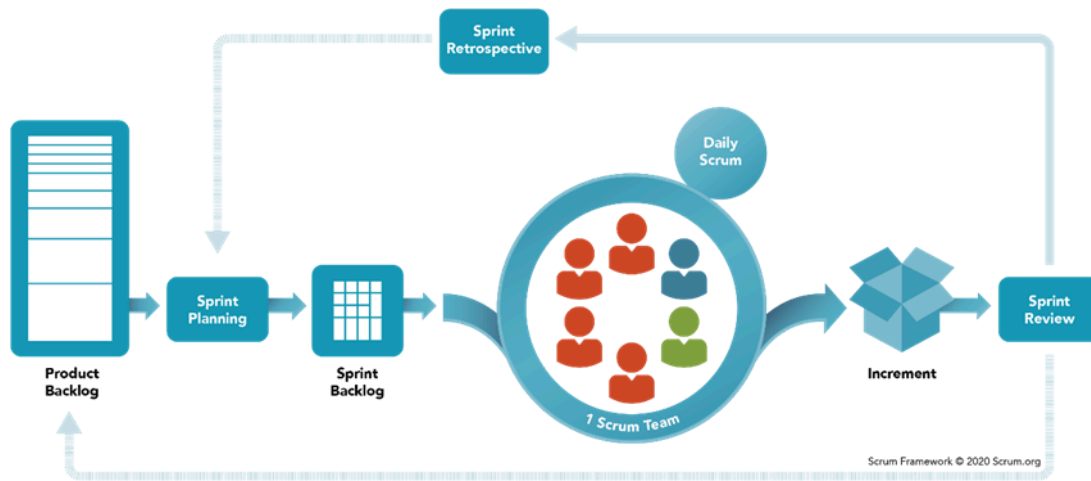

Fig 3.1 Scrum Methodology

(“Courtesy of Scrum.org”)

Scrum is executed in temporary blocks that are short and periodic, called Sprints, which usually range from 2 to 4 weeks, which is the term for feedback and reflection. Each Sprint is an entity in itself, that is, it provides a complete result, a variation of the final product that must be able to be delivered to the client with the least possible effort when requested.

The process has as a starting point, a list of objectives/ requirements that make up the project plan. It is the client of the project that prioritizes these objectives considering a balance of the value and the cost thereof, that is how the iterations and consequent deliveries are determined.

On the one hand the market demands quality, fast delivery at lower costs, for which a company must be very agile and flexible in the development of products, to achieve short development cycles that can meet the demand of customers without undermining the quality of the result. It is a very easy methodology to implement and very popular for the quick results it gets.

Scrum methodology is used mainly for software development, but other sectors are also taking advantage of its benefits by implementing this methodology in their organizational models such as sales, marketing, & HR teams etc.

Roles and Responsibilities

- Scrum Master

The person who leads the team guiding them to comply with the rules and processes of the methodology. Scrum master manages the reduction of impediments of the project and works with the Product Owner to maximize the ROI. The Scrum Master is in charge of keeping Scrum up to date, providing coaching, mentoring and training to the teams in case it needs it.

- Product Owner

Product is the representative of the stakeholders and customers who use the software. They focus on the business part and is responsible for the ROI of the project. They translate the vision of the project to the team, validate the benefits in stories to be incorporated into the Product Backlog and prioritize them on a regular basis.

- Team

A group of professionals with the necessary technical knowledge who develop the project jointly carrying out the stories they commit to at the start of each sprint.

Group Dependencies

- MERN Development Team

MERN Team develops back-end of web application. The API developed by MERN team is then used by other teams to develop front-end and database.

- Full stack Development Team

Javascript works in both back-end as well as front-end development. It uses API developed by MERn team. It processes documents and make it processable by MERN team.

- DBA Team is responsible for entire database related work. It provides database service to Java as well as .Net team.

CONCLUSION AND DISCUSSION

Overall Analysis of Internship

Problem Encountered and possible solution

Summary of internship

Limitation and Future Enhancement

CONCLUSION AND DISCUSSION

Overall Analysis of Internship

1. Since the very first day of internship, I learned a lot of new things from the respected industry guides and fellow interns.
2. First of all, started from basics of Core MERN then started learning few advanced concepts in Express.js.
3. Then learned Scrum methodology.
4. Overview of Laravel is given.
5. REST API is covered.
6. POSTGRES is covered.
7. HTML and TAILWIND CSS overview is also given.
8. Project work is assigned.
9. Project work is completed and report is prepared.

Problem Encountered and Possible Solutions

Problem Encountered:

10. Some of the applications are only used through iphone.
11. Not user-friendly websites.
12. Many of them need to install separately to use body measurements.
13. Not completely available for ecommerce with

Avatar. Possible Solutions:

1. Need to make website which is available for android users also.
2. User-friendly responsive websites.
3. Simple language must be used so that customer can easily understand.

Summary of Internship

Table 8.4 Summary of Internship/Project

Project Title	Ecommerce website with Avatar	
Aim	Our main Aim is to remove the barrier that is generated due to lack of consumer trust as they are not physically touching or can watch the product but by showing it on avatar they can at least look and decide that how it will suit on them as per body measurement. When you understand who your ideal customer is, what they look like, their habits, interests, challenges, aspirations, in fact everything about them, you'll be much more effective in marketing to them.	
Developed At	Wappnet System Pvt. Ltd.	
Project Category	Web site	
Tools	IDE	VS CODE
	Languages/Frameworks	React.js, node.js, Express.js, python Django
	Database	Postgres
Duration	3 Months (January 2022 to April 2022)	

Limitation and future Enhancement

1. Payment system is not added still.
2. We will add payment system in future.
3. We will add more products as per client requirement.
4. Calculation of body measurement is work in progress.
